

Replication

To replicate results shown in the report:

Run sequentially the below sequentially, waiting for output message “All projects processed!” before proceeding with the next

Please note sbert_svm.py will require much more time depending on hardware specifications and without CUDA

```
python tfidf_nb.py
```

```
python sbert_svm.py
```

```
python wilcoxon.py
```

Test results will be saved in .outputs directory in their respective .csv files titled with the project followed by the embedding and classifier combination
